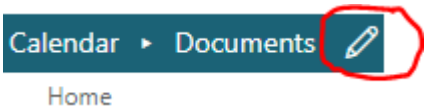
Configuring Smart Breadcrumb

You must have Administration rights to be able to configure the Breadcrumb.

On Modern SharePoint site collections, the breadcrumb will appear automatically in the header of the page and assuming you have Administration rights, you will see a pencil icon at the end of the breadcrumb. Clicking the pencil icon will expand the iWorkplace Breacrumb Administration panel.



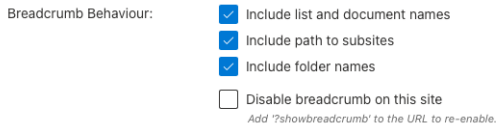
For Classic SharePoint site collections, go to: *Site Settings> Site Collection Administration> iWorkplace Breadcrumb Administration* to set up the feature.

Item Separator: default is > but any character(s) can be chosen.

Breadcrumb links: enter Link Text and Link URL, you can add up to 5 links.

Breadcrumb CSS: this can be used to apply additional CSS to the styling of the Breadcrumb. The CSS is inserted into the breadcrumb wrapper so it can be used to set inheritable defaults like colour and font size. It cannot be used to style individual elements within the breadcrumb.

When setting colours, it is preferable to set the two CSS variables (--bc-bg-color and –bc-fg-color) rather than setting color or background-color directly. The breadcrumb uses these variables to flip the colours of the edit button on hover.



Include list and document names: list and document names* will be displayed on the breadcrumb.

Include Path to Subsites: if left unchecked then subsites will not appear in the breadcrumb, giving the impression that their content is part of the site collection.

Include folder names: if left unchecked the folder names will be excluded from the breadcrumb. This can be useful when folders are used to manage permissions only and thus do not need to be displayed.

In pages libraries: if you want the hyperlink on the folder name to link to an actual page and not the pages library, you will need to ensure that there is a default.aspx page in the that folder. I.e. If [Library]/[Folder Name]/default.aspx exists, then the folder name in the breadcrumb will link to this page.

Disable breadcrumb on this site: Setting this option will disable the breadcrumb on this site. To temporarily enable it again (in order to get access to the settings) add a ***showbreadcrumb*** parameter to the URL.

Note: The breadcrumb will automatically hide the name of the library that contains the home page (e.g. the "Pages" library). However, to do this, the user must have "Browse Directories" permission. If the user does not have "Browse Directories" (which is the default for the Visitors group), then the library name will display.

☑ Browse Directories - Enumerate files and folders in a Web site using SharePoint Designer and Web DAV interfaces.

* Include document names in breadcrumb: note that the only case where the document name will appear in the breadcrumb is for a web page. Any other type of document opens in its own editor which does not have the breadcrumb.
