Employee Files

Employee Files are an excellent case for Smart Case Files.

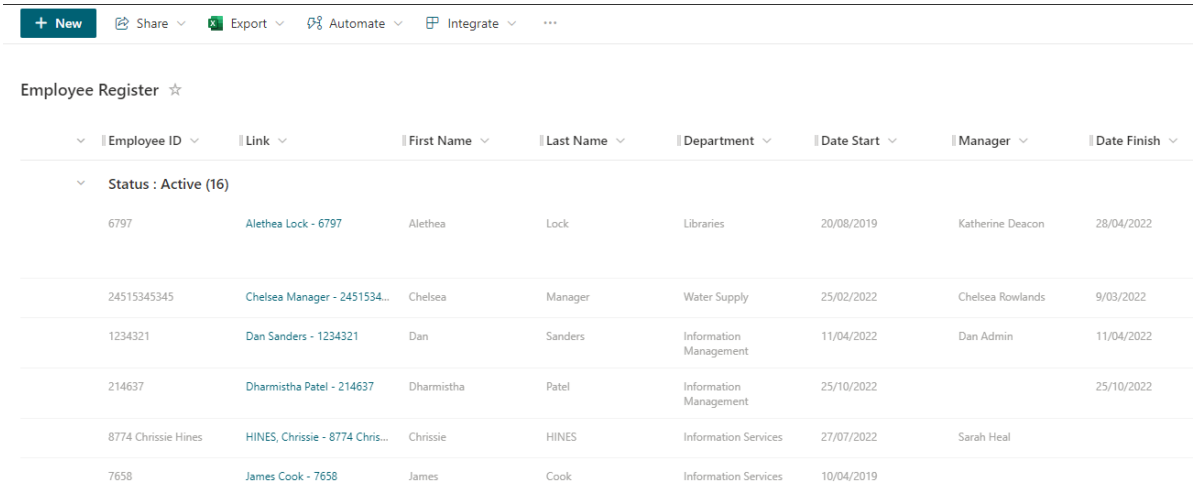
Security

Security is managed centrally on the Employee Register and can be set up so that master settings are applied when a new employee folder is added. Multiple levels of security can be achieved within the one employee folder. See the examples below.

Security can be set on each folder. This allows options like each employee having read access to their individual folder, managers having contribute access to their team member's folders and HR having contribute access to all folders. Users will not even see a folder is present if they don't have access to it.

This security can be further customised to sub folders within the employee folder. These sub folders can be automatically created when the top-level employee folder is created and has security applied based on some pre-set rules. For example, there might be a subfolder that the manager can access such as "Performance Reviews", but HR may not want the manager to have access to other subfolders or documents within the employee's folder. Payroll may just need access to "Payroll" and nothing else.

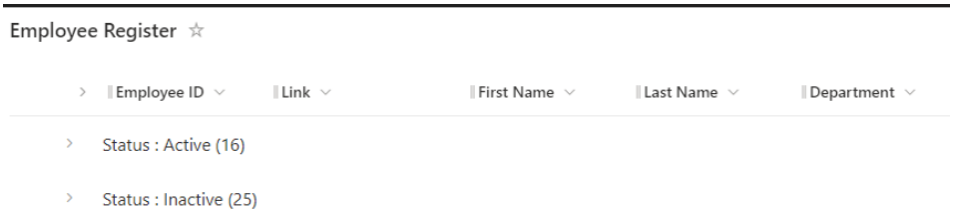
It is also easy to update the Employee's manager and therefore the associated permissions in the Employee Register should the employee's manager change.



Users can be added to "Employee" or "Manager" columns in the Employee Register and can be changed or removed at any time by editing the item.

Active and Inactive Employees

Employee folders can be easily changed between being an active/inactive employee. By changing this status on the employee register, the employee folder and all its contents is shifted between document libraries of the same status name behind the scenes. This means that when an employee leaves the organisation the employee's folder is moved into the inactive library. The documents and information about the employee are still available but can be removed from your day to day working area removing clutter in the register view or document library.



Snapshot of active and inactive employees within the organisation

Finance

Full Name *

BLOGGS, Joe

Last Name *

BLOGGS

First Name *

Joe

Status *

Active

Inactive

Manager

Enter a name or email address

Date Start

Edit the item to change the employee from active to inactive

Metadata inheritance

The use of a centralised employee register allows all the metadata (information about the employee) to be inherited onto the documents about the employee. This is achieved by uploading the document into the employee folder and the metadata such as employee ID, name, department is automatically tagged against the document. This means that these documents can be found in search by a wide range of search terms. The documents will only be available via search to those who have permission to see them in the first place.

Active > Alethea Lock - 6797

Name	Document Type	Employee ID	Department	Date Start	Date Finish
Alethea.url		6797	Libraries	20/08/2019	28/04/2022
Alethea Lock - Reference Check.docx		6797	Libraries	20/08/2019	28/04/2022
Alethea Lock - Authorised Contract.docx		6797	Libraries	20/08/2019	28/04/2022
EOY Summary 2020.docx		6797	Libraries	20/08/2019	28/04/2022
Performance Review Alethea Lock.docx	EMPLOYMENT related	6797	Libraries	20/08/2019	28/04/2022

Document within the Joe Bloggs folder automatically inherits the metadata:

- Employee ID
- Full Name
- Department
