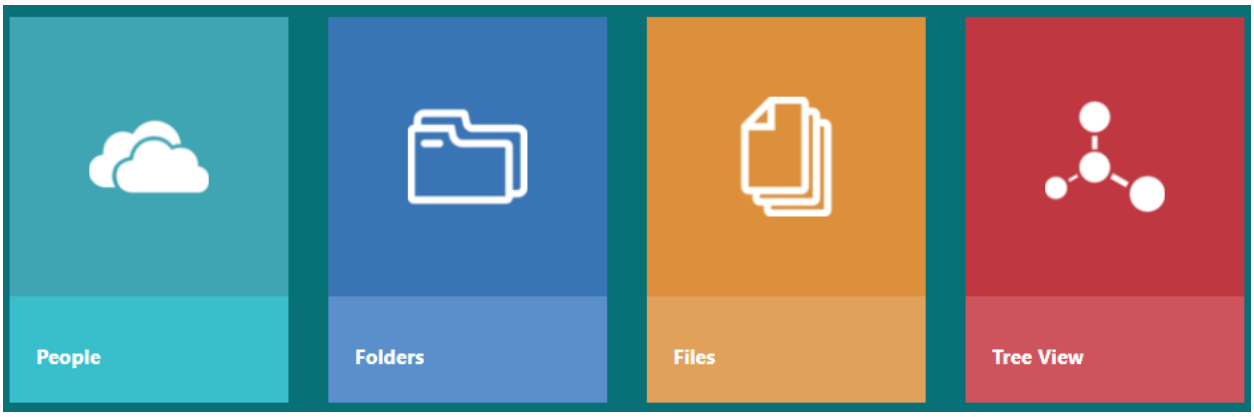
Using OneDrive Manager

OneDrive Manager Home shows four Tools:



Tools	
People	Provides an overview of OneDrive storage in your organisation by person
Folders	Provides an overview of all folders within all the OneDrive's' in your organisation
Files	Provides an overview of all files within all the OneDrive's' in your organisation
Tree View	Provides an overview of the structure on an individual's OneDrive, including the files, folders, and shared files

Menu Bar

In addition to these tools, the Menu Bar across the top allows for choosing Rules, Settings and Logs:

Task Bar

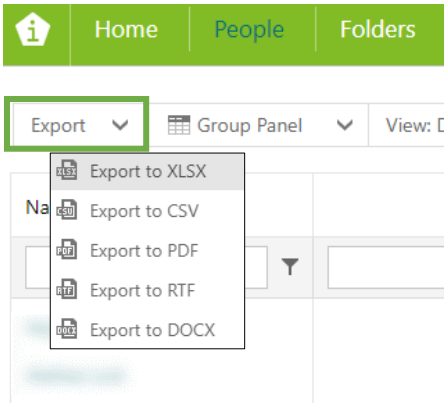
Within each tool, the Task Bar allows you to edit the display of results and apply specific actions including:

- Export results
- Grouping results
- Filtering results
- Create, edit and delete views
- Settings and Quick actions
- Apply rules

Note: The Task Bar options differs between the four tools.

Exporting results

An export of the page view can be done for various file types.



There is an option to export your selections to various file types:

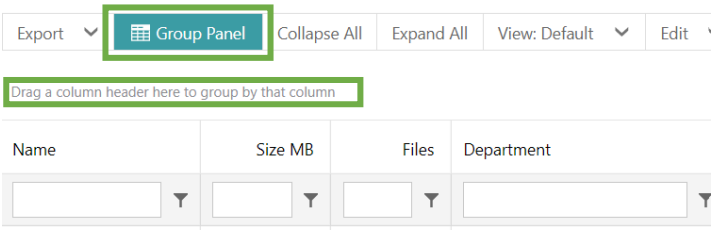
- XLSX (Excel)
- CSV (Comma Separated Values)
- PDF (Printable Document Format)
- RTF (Rich Text Format)
- DOCX (Word)

If there is a filter applied, only those rows that are showing in the filtered view will be exported.

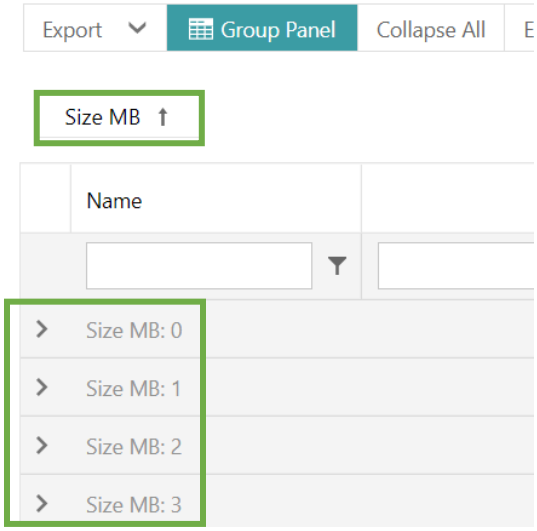
Grouping

Each column allows grouping of the results shown.

If you click the Group Panel button an additional row will appear above the information grid.

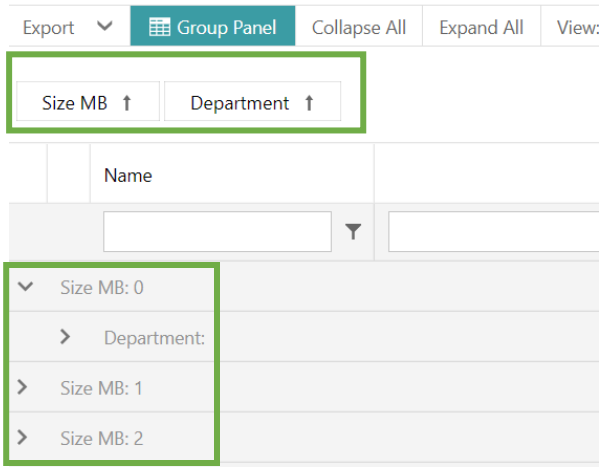


Drag a column here to group by that column.

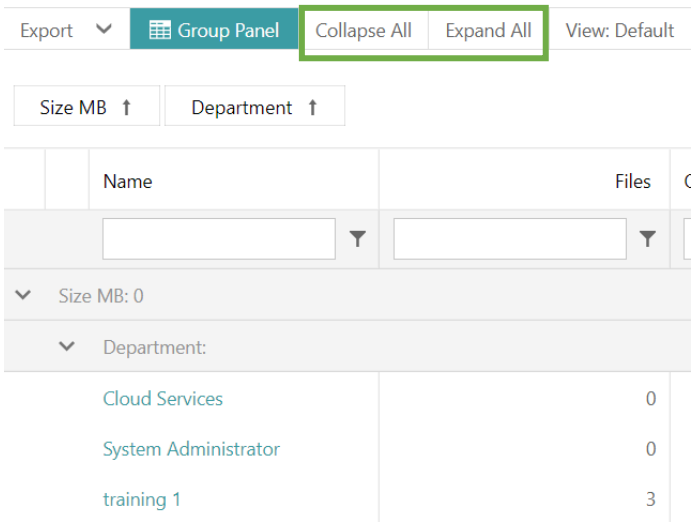


In this case, we have dragged “Size MB” to the top area meaning that the rows in the grid are now grouped by size in MB.

We can expand these rows individually to see the people who have files of that size.



Additional columns may also be dragged into this area which creates a nested view.



Each row can then be individually expanded – and the filters can be applied to the results.

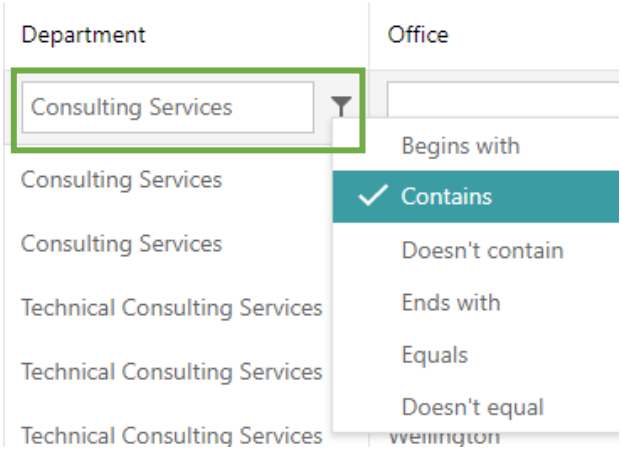
The “Collapse All” and “Expand All” buttons may also be used at this stage to show all items in the rows or hide them to the top level.

Filtering results

Each column allows filtering of the results shown.

See examples below for how the data can be filtered for different columns.

Department column



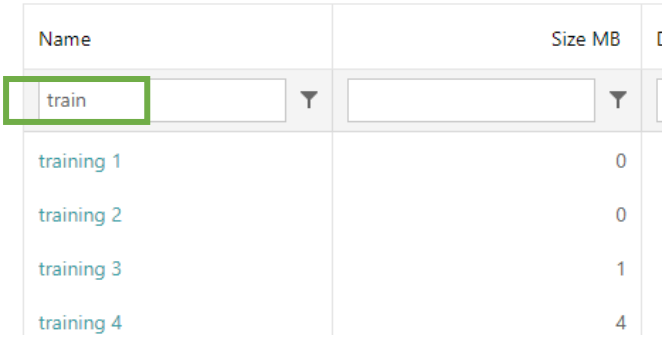
Clicking on the filter icon shows the options available for this column.

They are:

- Begins with
- Contains
- Doesn’t contain
- Ends with
- Equals
- Doesn’t equal

Click on the filter required, then enter the required value in the filter box.

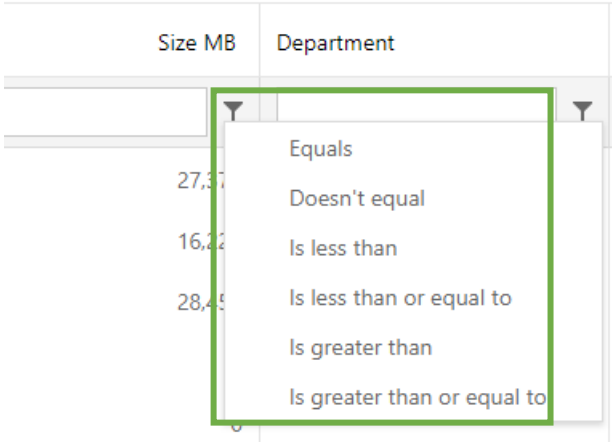
Name column



In this case, we have entered “train” in the filter box and 8 results are returned all beginning with “train”.

Note that the filter string is NOT case sensitive.

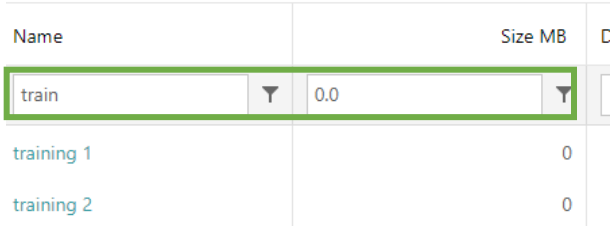
Size MB column



Clicking on the filter icon for the Size MB column allows you to filter on:

- Equals
- Doesn't Equal
- Is less than
- Is less than or equal to
- Is greater than
- Is greater than or equal to

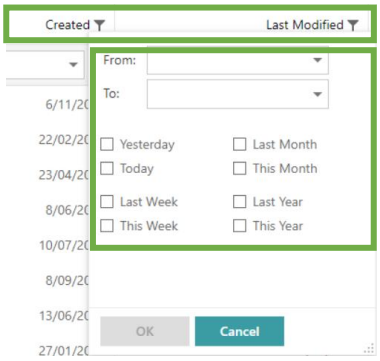
Click on the filter required then enter the required value in the filter box.



In this case, we have selected "equal to" and "0" as our parameters and all people with no files are displayed.

Note that filters have a cumulative effective – so we have filtered on "begins with" "train" in the name and "0.00" in the size so the results returned are those which meet both criteria.

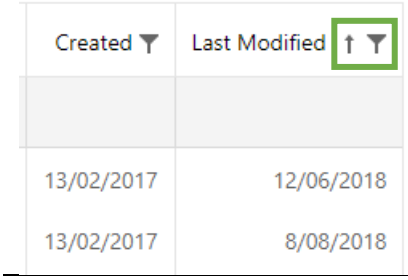
Created and Last Modified Dates



The "Created" and "Last Modified" dates both allow for the below by selecting the filter symbol next to the column name:

- A range of dates to be selected
- Yesterday
- Today
- Last Month
- Last Week
- This Week
- Last Year
- This Year

Note that the Date Range can be combined with one of the other selections – such as "This Month" to create a combined list



You can also change the sort order on either the Created date or Last Modified date by clicking on the title and an up or down arrow will appear indicating the sort order of the dates.

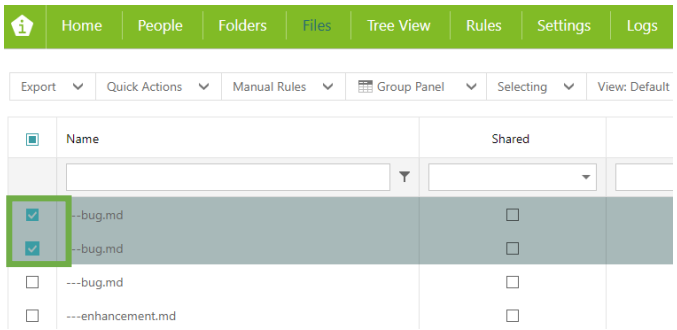
Selecting all

Selecting all allows you to select multiple results or an entire page at a time.

You can select individual items by selecting the tick box on the far-left side.

In this case we have chosen to select the top two items in the view.

Note: If we have a filter active on any column, the items selected will also have the filter applied.

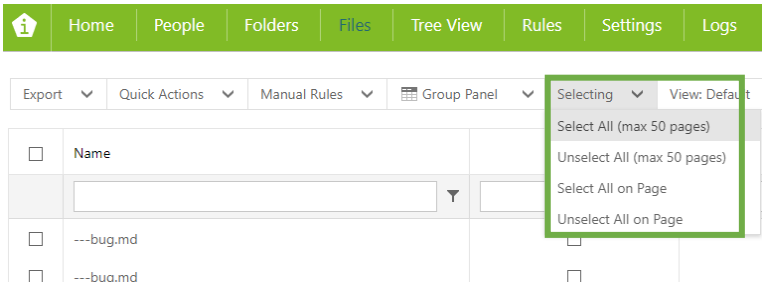


To select multiple items at a time, click on the Selecting button drop down.

This will drop down to show four options as shown.

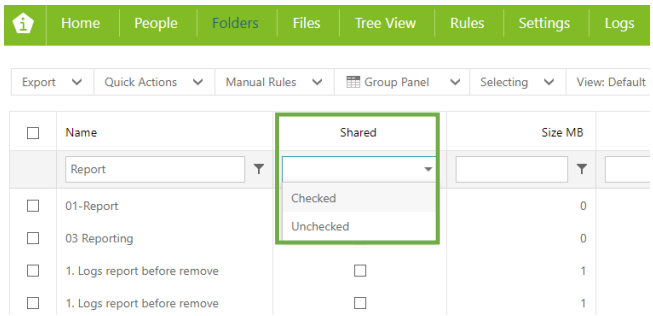
Note: The maximum number of items that can be selected at one time is 50 pages.

Note: If we have a filter active on any column, the items selected will also have the filter applied.

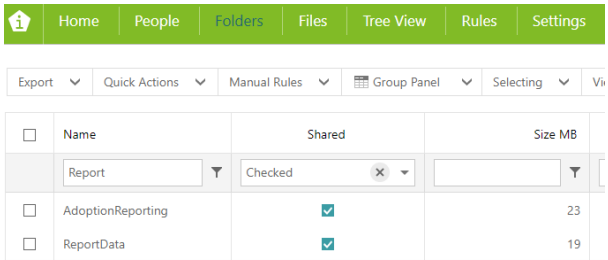


Reporting on shared files and folder

The Shared column displayed in the four tools shows files or folders that have been shared.



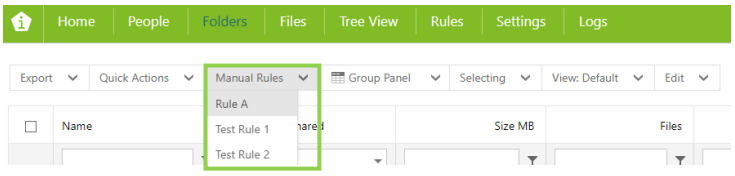
Filtering the Shared column to Checked will display all folders that have been shared across all OneDrives.



In this example, the results are filtered to show all folder that contain the word "report" that have been shared.

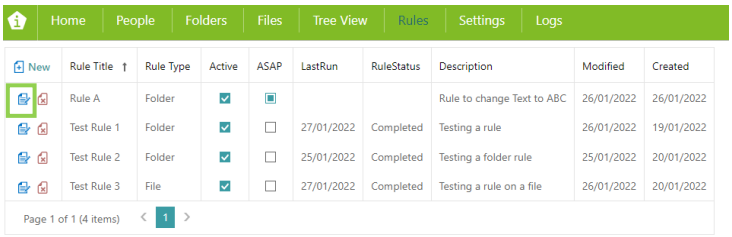
Manual rules

Rules that have been configured in the Rules tab and selected to be able to run manually will appear as options within the Folders and Files Tools.



When a rule has been selected to run "Manual" – it will appear in the Manual Rules drop down in the task bar within the Folders and Files Tools.

Note: if the rule you require is not appearing in the drop down, make sure the rule is set to manual in the rule settings.



Running a rule > select any of the rule options to run.

The rule will run according to the schedule set in the rule.
