Creating, Editing and Deleting Views

Views can be customised to display different columns, sorting, order and grouping. In the view of the People Tool above, columns such as Department, Office, Created and Last Modified are being displayed and OneDrive's ordered in alphabetical order.

The Default view is available out of the box. This provides:

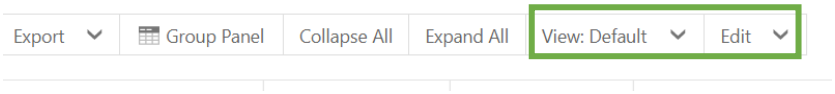
- Name
- Size MB
- Files
- Department
- Office
- Job Title
- Created Date
- Last Modified Date

However, the Default view may be changed as well as adding other views.

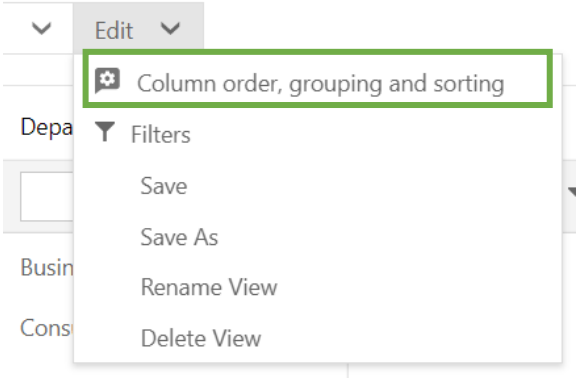
Editing your view

To change your default view, make sure "Default" is visible in the view button.

Click on the "Edit"



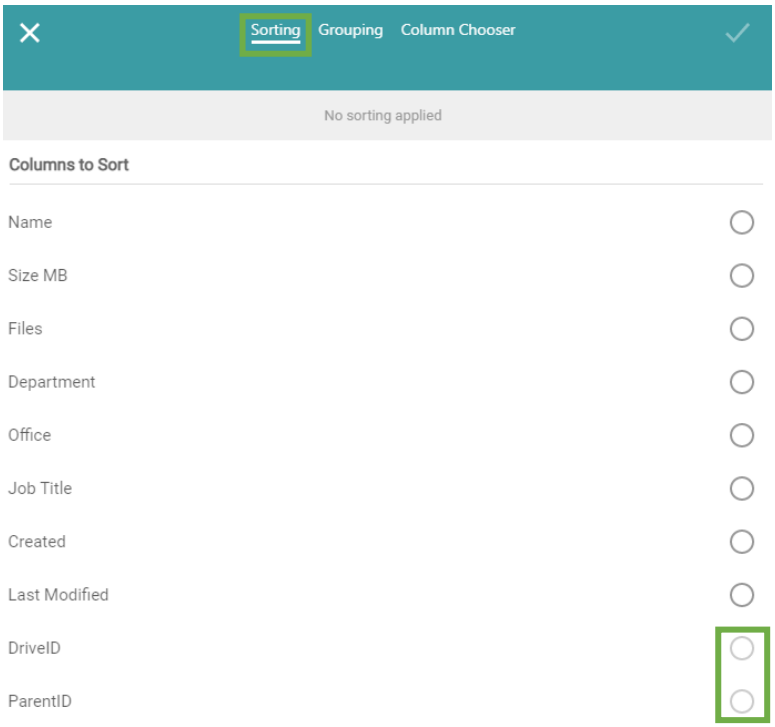
If you want to change the column order, grouping or sorting, select the top option.



Sorting.

A dialogue box will be displayed showing all available columns.

Columns that are not available for sorting are greyed out.
In this case, it is DriveID and ParentID.

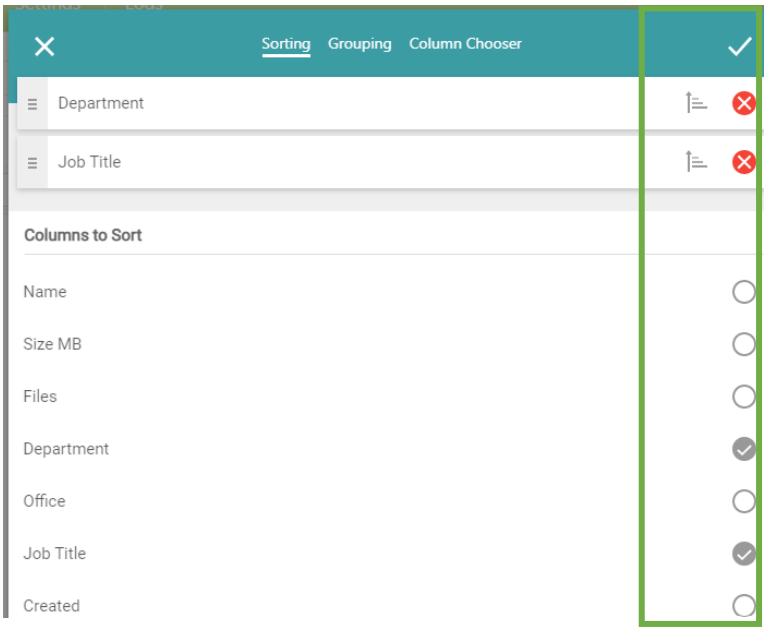


Choose the columns that you require to be sorted. Here we have chosen Department and Job Title.

Either of these items now appear in the top panel and can be de-selected by clicking on the red "x".

Clicking on the tick at top right will save the selections.

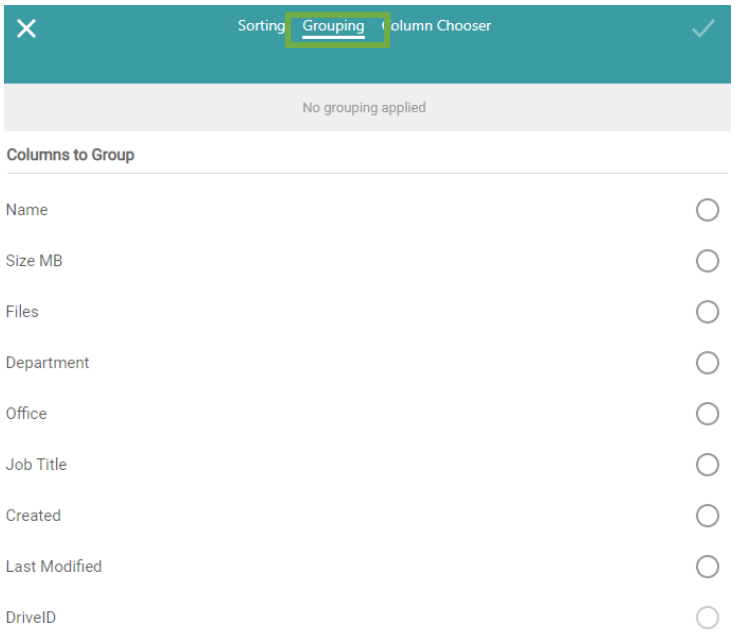
The resulting display will now have the columns sorted in the order selected.



Grouping.

A dialogue box will be displayed showing all available columns.
Columns that are not available for sorting are greyed out.
In this case, it is DriveID and ParentID.

Selecting columns to group is the same process as above



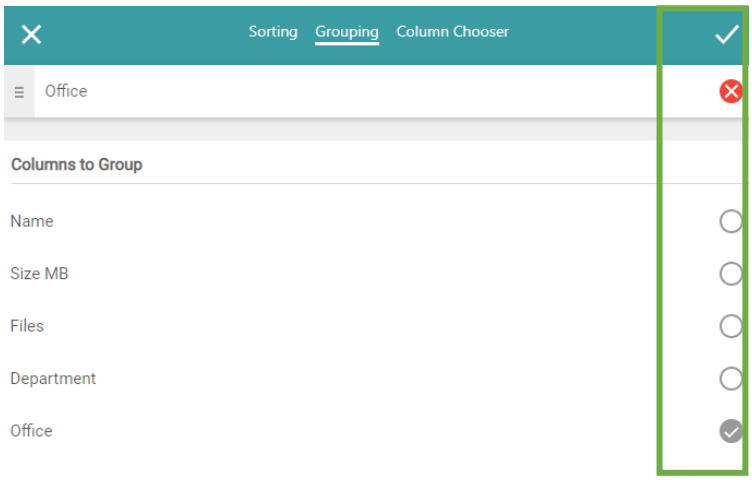
Choose the columns that you require to be grouped.

Here we have chosen Office column.

This column now appears in the top panel and can be de-selected by clicking on the red “x”.

Clicking on the tick at top right will save the selections.

The resulting display will now have the columns grouped by Office.



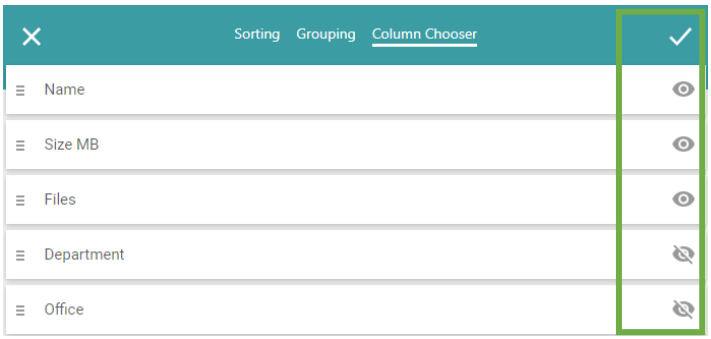
Column Chooser.

A dialogue box will be displayed showing all available columns.

Columns that are displaying in the view will show an open eye icon. Columns that are hidden in the view will show an eye icon with a line through.

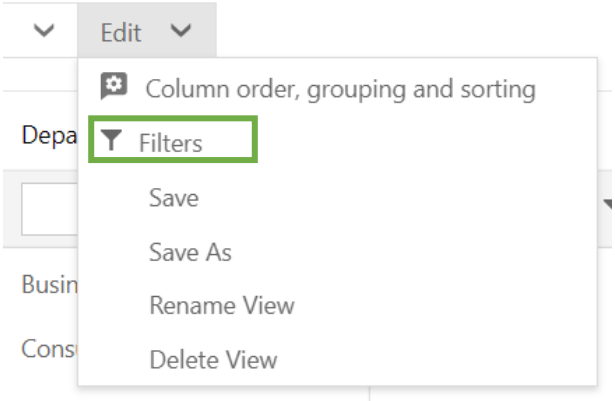
To make a view hidden or unhidden, select the eye.

Clicking on the tick at top right will save the selections.

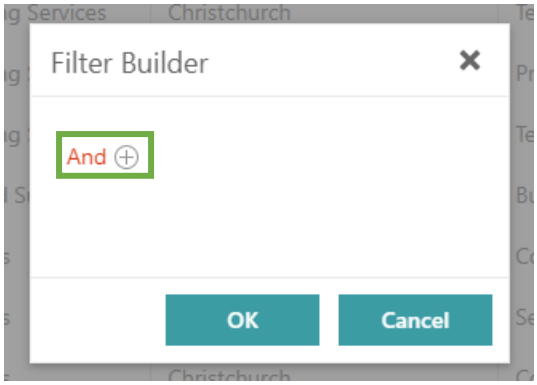


Editing your view – Filters

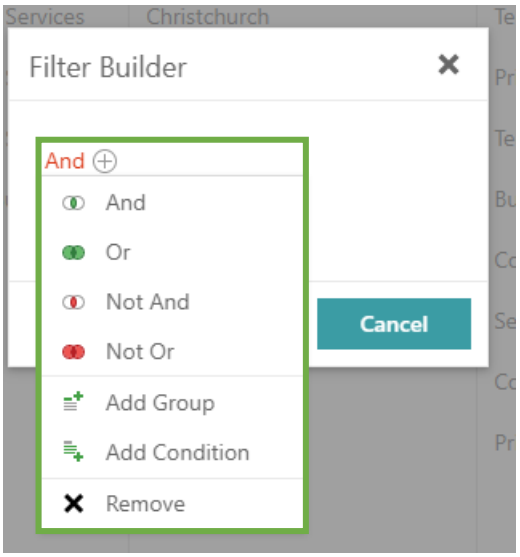
Your view can also be a filtered view using the Filter Builder. Do this by selecting "Filters" in the drop-down edit box.



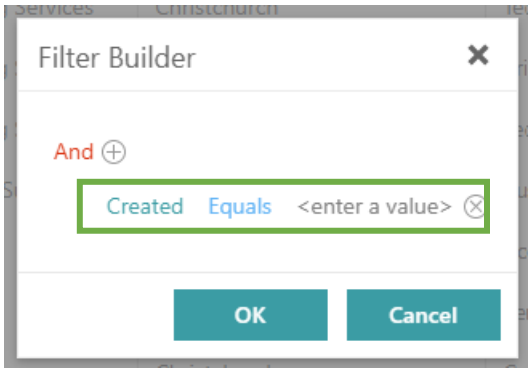
This dialogue box will be displayed where you can enter a number of conditions to filter on. Click the "+" symbol to add a condition.



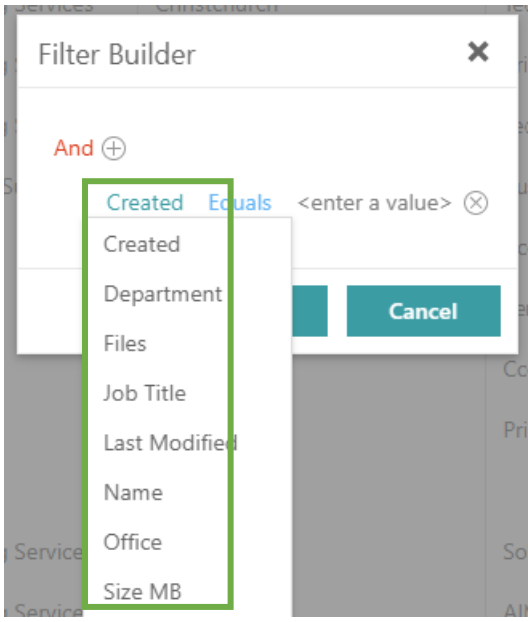
A drop-down selection will be displayed where you can select the connector condition that you want to use.



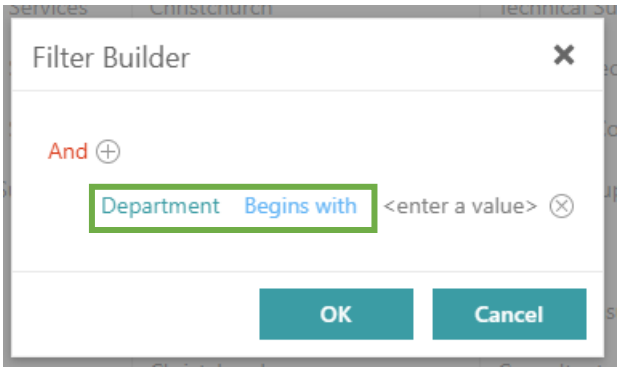
This gives a display where you can select the column that you want to filter on. It defaults to “Created”



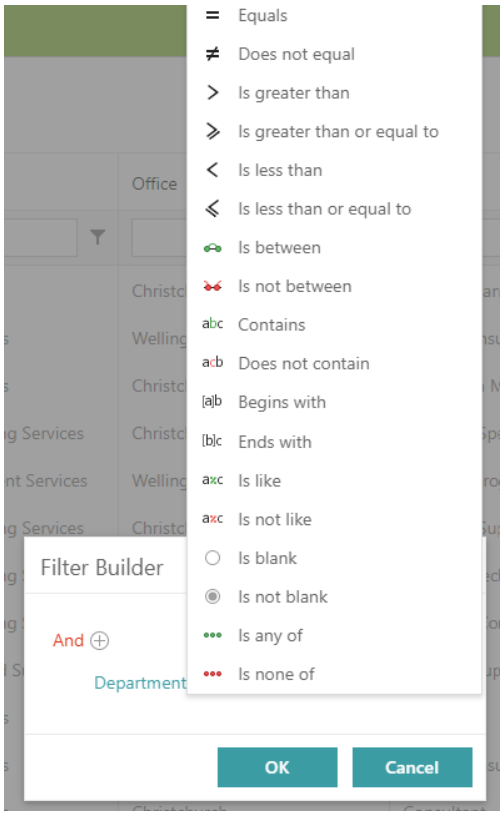
Clicking on “Created” gives a drop-down of other fields that can be selected to filter on.



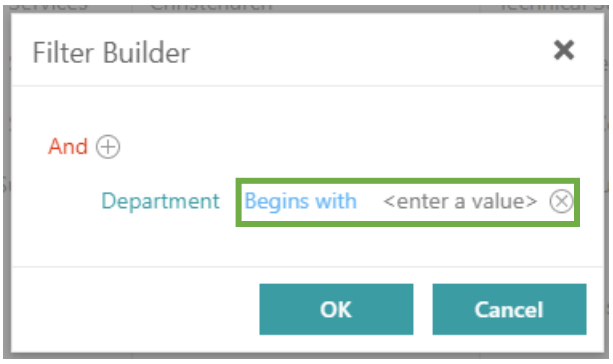
In this case, we have chosen “Department” and we are now given another default of “Begins with”



Clicking on “Begins with” gives another drop-down selection with many choices

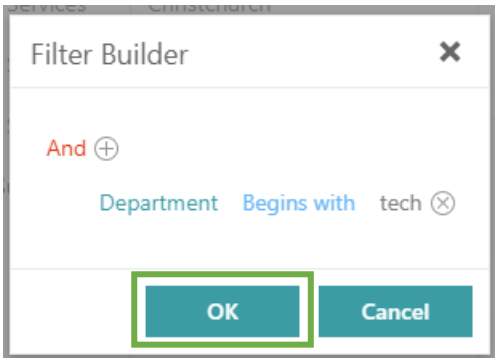


Choose the option required – in this case we will choose “Begins with” and we can enter a value by clicking on the <enter a value> field



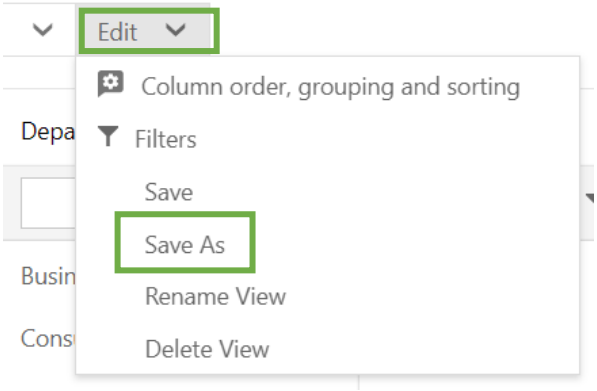
Which provides a box to enter the required value – in this case we have entered “tech”.

You may now click “ok” to save this selection or continue to add more filter conditions.

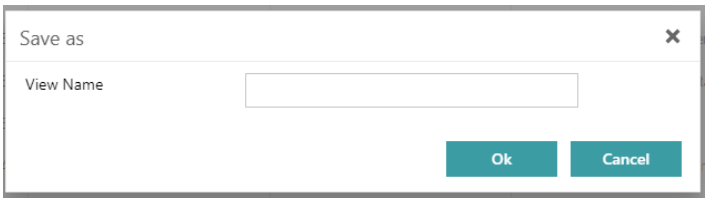


Creating, renaming and deleting views

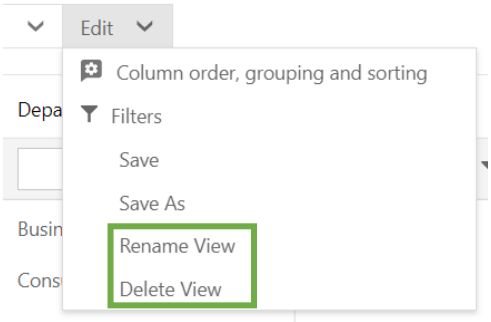
More views can be created by Edit > Save As.



You will be prompted to name your view which will be a copy of the one you chose. You can then change this view to have different columns or filters.



There is also an option to rename your view or delete it.



Renaming the view will show this dialogue box where you can enter your new name and click “Ok”.	Selecting the Delete View option will take you to this confirmation dialogue.
