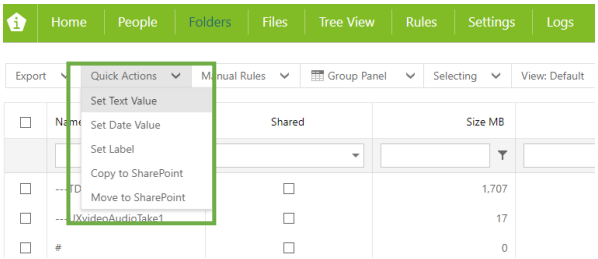
Quick Actions and Settings

The **Quick Actions** button allows you to apply a set of defaults actions to your results.

The **Settings** buttons allows you to edit the settings for the default Quick Actions

The following Quick Actions are available

- Set Text Value
- Set Date Value
- Set Label
- Copy to SharePoint
- Move to SharePoint



Set Text and Date Value Quick Actions

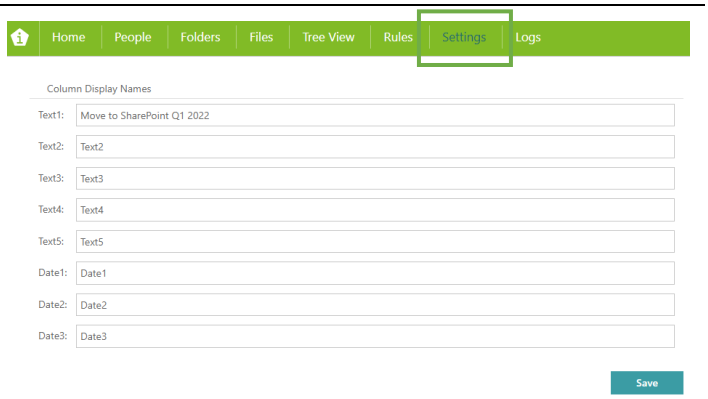
These actions allow you to apply date and text values to columns for files and folders.

If the column name exists in the SharePoint library, the metadata will also be copied to SharePoint when you move/copy the file to the SharePoint library.

Using this action can help with help filtering and processing the results in OneDrive Manager.

Settings

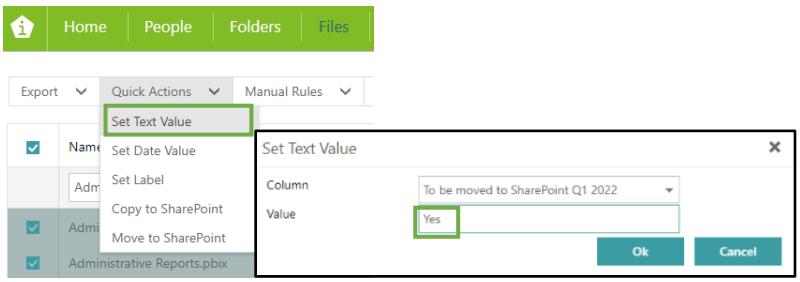
The Settings button allows you to rename the columns the text and date values are applied to.

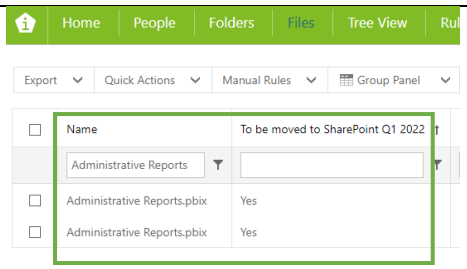


Example

In this example we have filtered any files containing the word "Administrative Reports" in the file name.

We can then apply a quick action to flag these files are to be moved to SharePoint at the end of the Q1.





Set Label Quick Action

This action allows you to apply a Retention Label to files in OneDrive.

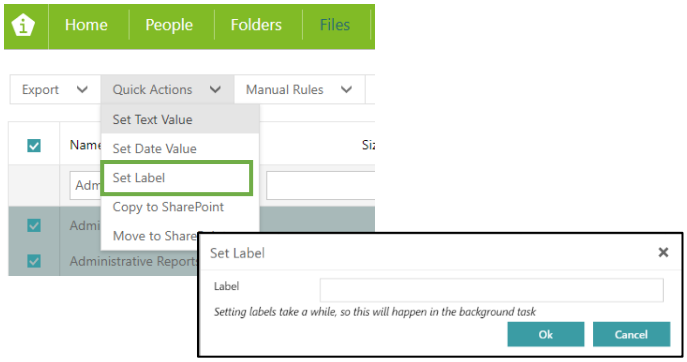
Enter in the name of the Retention Label.

Note: Configuration of the Retention Label and publishing of the Retention Label to the location must be configured in the Compliance Centre first.

The Retention Label name must match the name of the Label in the Compliance Centre and the Retention Label must be published to the location.

You need E5 licences to apply labels to folders.

This action happens as a background task and can take up to 24 hours.



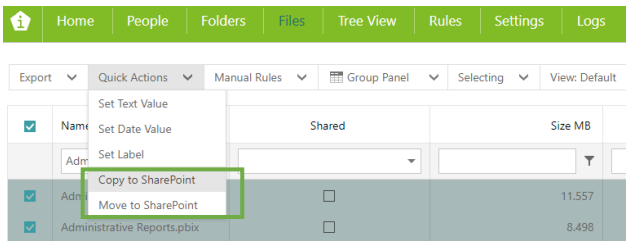
Copy and move to SharePoint Quick Action

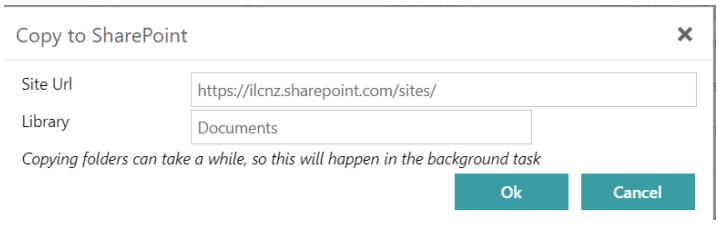
This action allows you to copy or move files or folders in OneDrive to a SharePoint location.

The Copy to SharePoint creates a copy of the file in the specified SharePoint location.

The Move to Sharepoint moves the file to the specified SharePoint location, removing the file from OneDrive.

If you have applied a text or date value to the file in OneDrive Manager and the column exists in the SharePoint library, the metadata will be copied across.



In both cases, this dialogue box will appear and you may chose the Site Url and the Library (display name) to which they will be copied or moved.


This action happens as a background task and can take up to 24 hours.
